Practical Session I

Key issues

What do we want to achieve or pursue with audit?

What do we want to audit? (e.g. the organisation, system, creator)

Who should do the audits (e.g. specialised bodies), and what are the requirements for those bodies?
Practical Session II

Requirements, Approaches, Frameworks and Areas

What framework(s) do we need to conduct an audit?

Does the business context influence the processes or methodology for audit?

Should the framework(s) distinguish different levels of compliance?
Practical Session III

Practice and Implementation

Why certification? Will certification for instance increase validity of and trust in services provided by digital repositories?

What is required of organisations to allow audit?

To what extent will the audit of a digital repository be different from the audit of for instance a government organisation or a company?
